

The Olympian 4.5

The Olympian 4.5, available in a diameter of 4.5 metres/14ft 9", comes complete with a 19mm fire-retardant deck, to provide an attractive, low profile and completely stable full platform revolve.

With a height of only 120mm/5", the Olympian has carved a distinctive niche for itself in showrooms, exhibitions and shows across the world because it combines elegance with ease of installation. As the unit does not require a pit to be dug, the turntable can be moved around the display area to change the showroom ambience and mood, and a static curb surround completes the picture, providing an elegant way to add value and another dimension to vehicles on display.

"They are in constant use, yet they have been trouble-free since our new showroom was opened – very impressive"

The Revolving Stage

The revolving stage, available from 5 metre diameter upwards, is ideal for larger prestige vehicles. Used as a flush-fitting revolve or mounted above the showroom floor, the turntable can completely encircle the car for the ultimate in style and sophistication, forming the main centrepiece and focal point of a showroom.

For optimum flexibility and elegance, a flush-fitting unit allows vehicles to be moved around the showroom with ease to create new displays and the potential for increased sales.

A 25mm fire-retardant plywood deck is supplied as standard.

"One of the best places to display our cars"

The Merlin Major 21

A Wizard Idea

The Merlin Major 21 is virtually invisible in operation, allowing vehicles to be rotated as if by magic.

Designed to rotate the majority of contemporary vehicles, the turntable is ideal for turning both the smaller family sized saloons and the larger vehicles up to 2500kg/5500lbs in weight. This flexibility ensures that a full vehicle stock can be rotated, enabling creative yet cost-effective displays to be presented. Safety is paramount, which is why the turntable has been designed to stop immediately upon the slightest of obstructions. Robust, compact, versatile and extremely smooth running, the Merlin has been used effectively by a number of major motor manufacturers worldwide.

Totally portable and requiring no floor fixing, this powerful performer can even be used outdoors, operating from the car's own 12 volt battery. Try one on the forecourt, at launch events, for special vehicle brand displays or take it to your local shopping mall – the choice is yours. Like the Olympian 4.5 and Revolving Stage, the Merlin is supplied with 5 amp slip rings to provide a facility to connect electrical power to the rotating surface, thereby enabling further lighting and other special effects.

The Merlin has been used successfully to draw prominence to a number of prestigious marques including Mercedes, BMW, Jaguar, Volvo and many more.

"The Merlin certainly worked its magic for us"
